<i>Cheat Sheet: Critical “Need to Knows”</i>	2
1 Overview	5
2 Objectives	5
3 Naming Conventions	5
3.1 Common Prefixes	6
3.2 Common Form Control & Object Prefixes	7
3.3 Constructing Procedure Names	8
3.4 Naming Parameters	8
3.5 Naming Labels	8
3.6 Scoping Prefixes	9
3.7 Names: Files, Procedures, Variables	10
4 Good Coding Practice / General Rules	12
4.1 Option Explicit	12
4.2 Variable Declaration	12
4.3 Constant Declaration	12
4.4 Avoid Variants	13
4.5 Convert Data Types Explicitly	13
4.6 Use Constants to Avoid Hard-Coding Values	13
4.7 Use Variable Naming Conventions	14
4.8 Variable Scoping	14
4.9 Explicitly Type Cast Return Values	14
4.10 Always Have Error Handling	15
4.11 Program Control / Exit Routines	15
4.12 Meaningful Variable Names	16
4.13 Range Names	16
4.14 Comments	16
4.15 Use Standard Indentation	17
4.16 Avoid Single-Line If Constructs	17
4.17 Select Statements	17
4.18 String Handling	18
4.19 Nothing	19
4.20 Arrays	20

4.20.1	Reading/Writing Cell Values	20
4.20.2	Traversing an Array	20
5	<i>General Build Format</i>	21
5.1	Indenting	21
5.2	Labels	22
5.2.1	Procedure Length	22
5.2.2	Line Length	22
5.2.3	Statements Per Line	23
5.3	Parentheses	23
5.4	Comments	23
5.5	Testing for equality	23
6	<i>Modules</i>	24
6.1	Naming Modules	24
6.2	Module Header Commenting	25
7	<i>Forms</i>	26
7.1	Control Names on Forms	26
7.2	Control Arrays	26
8	<i>Procedures</i>	28
8.1	Procedure Names	28
8.1.1	Standard event procedures	28
8.1.2	Class Properties and Methods	28
8.1.3	Public subroutine and functions	28
8.1.4	Private subroutines and methods	28
8.2	Procedure Header Commenting	29
8.3	Procedure Line Commenting	29
8.4	Procedure-Level Error Handling	30
8.5	The ErrorHandle Routine	31
9	<i>Summary</i>	32
10	<i>More Help</i>	32
11	<i>Further References</i>	32
12	<i>Appendix A – Full list of Prefixes</i>	33
12.1	Data Types and Common Object Variable Prefixes	33
12.2	Form Control and Object Prefixes	34
